

DQ2 Terminology

Processing

TIBCO Transfers	Secure SFTP File transfer process using TIBCO (from the District to the FDOE and vice versa).
NWRDC	Northwest Regional Data Center - Mainframe environment used for Student database reporting currently.
SFTP	Secure File Transfer Protocol - Encryption to securely transfer files between a client and a server.
Reject Edits	Critical survey checks defined in the student and staff database manuals. Records are rejected if they fail the checks outlined.
Batch Records	Processing multiple records simultaneously instead of individually. Often in an automated manner, to a system or database.
FERPA	Family Educational Rights and Privacy Act - Protecting Sensitive Data

Data Quality

UI	The system user interface for reviewing and monitoring processing or downloading reports and resource materials.
D-Files	Data extract of the clean survey data that does not contain any rejected records.
Gateway	The first screen displayed when logging into DQ2 that allows users to choose between Preflight or Production.
Preflight	Process available to districts to review data quality in advance of submitting to production. Preflight data is not used.
Production	Process available to districts to submit data for survey collection. The data in production is used for official FDOE reporting.
SSO	Single Sign-On is an authentication method that allows users to access multiple applications and websites with a single set of credentials.

Edits/Rejects

Error Reports	Generated after files are submitted to DQ2, the records contain reject edit errors.
Validations	Validations are used to check relationships between records of the same reporting format or different reporting formats (must review).
Exceptions	Shows records with data that look suspicious and require review by the district to confirm accuracy
Reports Menu	Show the reports available for the system being accessed such as D-Files, Validation/Exception, etc.
Search Screen	Allows users to search for a person and view their clean records for all formats.
Delete Requests	Removes all data, reports and any references to the data having ever existed.
